FOR WOMEN, THE RISK OF INJURY DOES NOT STOP WHEN THE FALL DOES. If placed below the bust area, polyester webbing can rise aggressively up and over the bust at the end of a fall, resulting in secondary related injuries to the wearer.

INJURY-PREVENTING ELASTICATED CHEST STRAP

That's why all our Sisi harnessesare fitted with an **ADJUSTABLE ELASTICATED CHEST STRAP** that stretches in the event of a fall, substantially reducing the pressure on the bust area. Furthermore, the chest strap can be moved up and down the shoulder straps, allowing each wearer to place it in the position that is most comfortable to them without compromising on the effectiveness of the harness.
